

Shelbourne Reynolds Power-mix Pro 9

£6,995.00

With a 9 m³ capacity, the single auger express can hold about 4,000 kg, depending on the feed's dry matter content. The machine can manoeuvre through narrow spaces and into small buildings thanks to its small single axle construction.

The feed can be released to the left or right using the fixed frame design of the front mounted express conveyor.

An elevating conveyor, on the other hand, can be positioned to the left or right and raised, enabling the delivery of feed up to 5'5" (1.65 meters).
